	TOYS, GAMES CONSOLE & LEISURE EQUIPMENT	17
	DIY, GARDENING, ELECTRICITY & HOME AUTOMATION	20
	THERMAL & CLIMATE ENGINEERING	22

**THE ANNUAL MINIMUM CHARGE
IS 200€ EXCLUDING VAT***

The amount of the eco-contribution is indicated in € per unit. It varies based on 4 adjustment criteria, which may result in either an increase (penalty) or a decrease (bonus). If the adjustment criteria cannot be substantiated, or in case of uncertainty, the least favourable eco-contribution should be applied.

ECO FEE MODULATION CRITERIA

The eco fee modulation criteria, supporting documents and control procedures are detailed in the document "**Eco-modulation Household EEE technical note**" available in the "Documents" section of your personal account on **Ecologic Producer Extranet**.

4 criteria in the price list table:

- **Non-separable battery** (penalty) or **separable battery** (bonus)
- **Presence of HFC gases** (penalty)
- **BFR in plastic** (penalty)
- **Single use** (penalty)

OTHER APPLICABLE CRITERIA

The equipment concerned is the subject of a pre-declaration including equipment references. For details on how to submit your declaration, please contact Ecologic at the following address: declaration@ecologic-france.com

Recycled Plastics Material (RPM)

The criterion of incorporating Recycled Plastics Materials (RPM) applies to all Household Electrical and Electronic Equipment (EEE).

For RPM from post-consumer waste from EPR channels (open circuit), excluding food-grade resins, the calculation base is established on the basis of 450 € (excl. VAT) per ton, to be reduced to the mass of RPM in the equipment. For RPM from post-consumer WEEE (closed circuit), the calculation base is established on the basis of 550 € (excl. VAT) per ton, to be reduced to the mass of RPM in the equipment.

* A minimum financial contribution is required to cover the administrative costs of reporting, invoicing and relations with ADEME.

Repairability / Durability Index

The equipment concerned is indicated in the price list tables by the icon :  If the reparability / durability index is greater than or equal to the threshold fixed, the bonus is 8.33 € excluding VAT or 16.67 € excluding VAT, depending on the equipment.

Following a regulatory change applicable from **January 1st 2026**, a product subject to a penalty can no longer qualify for a bonus, with the exception of bonuses linked to the use of recycled materials, in accordance with the **decree of September 5th 2025**.

Equipment set

Case 1: Set with accessories associated with main equipment (first placing on the market)

When EEE is sold as a set including electrical or electronic accessories, the total net weight of the set (including the electrical or electronic accessories) must be taken into account. The main equipment in the set determines the applicable category..

Example: A smartphone sold with headphones, a charger, and a case. In this case, the total net weight of the EEE package must be taken into account and the eco-contribution applied according to the main equipment, i.e., the smartphone, excluding the weight of the case (which is not an EEE).

Case 2: Set with several pieces of equipment (excluding accessories) or several similar pieces of equipment

When EEE is sold as a set containing several different or similar pieces of equipment, the net weight of each piece of equipment must be taken into account individually and the eco-contribution applied to each product according to its type.

- **Example 1: Set of various EEE.** Each EEE must be declared separately and the eco-contribution applied individually for each product according to its category.
- **Example 2: Set of identical EEE.** A batch of 5 pregnancy tests, each pregnancy test must be declared separately and the eco-fee must be calculated based on the net weight of each pregnancy test. For "passive equipment" see pages **20 & 21**.
