DEFINITION and use OF the eco-contribution

What is an eco-contribution?

The eco-contribution is part of the price of a new product: its amount offsets the cost of **waste management**. It is set up by the sector's eco-organisation, on behalf of the producer members.

It notably covers:

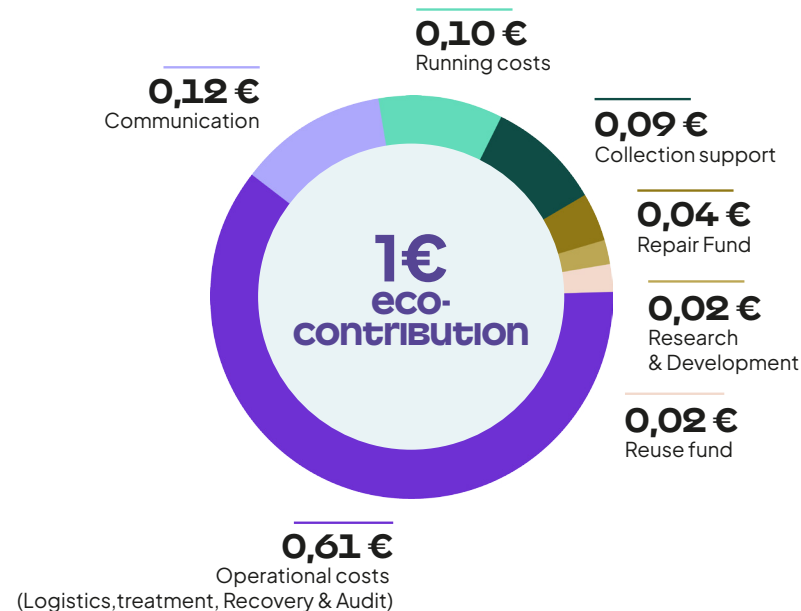

- Waste collection and removal
- Decontamination and treatment
- Product recovery: reuse, repair, recycling...
- Awareness-raising initiatives
- Monitoring and compliance

How is it calculated?

The amount of an eco-contribution is **not calculated arbitrarily** : it ties to the budget Ecologic needs to cover the end-of-life management costs of products, in accordance with the specifications set by the State.

What is it used for ?

USE OF €1 OF ECO-CONTRIBUTION PAID:

Who has to report?

The market operator

It is always the first company that places a product or equipment on the market that bears the responsibility and the obligation to file the declaration and to pay the eco-contribution.

Who is it?

To find out who holds this role, ask yourself the following question: “Which is the first company to invoice the article on French soil, with VAT?”

What to report?

As a member of Ecologic, you must report each year **the quantities of products placed on the market in France, for the Professional EEE**. The declaration therefore corresponds to the **number of units** of products placed on the market **per fee code**, for the **elapsed period**.

Products covered by the Environmental Code sold in mainland France and in the DOM-COM1 must be reported

Products exported abroad shall not be reported

► **note**

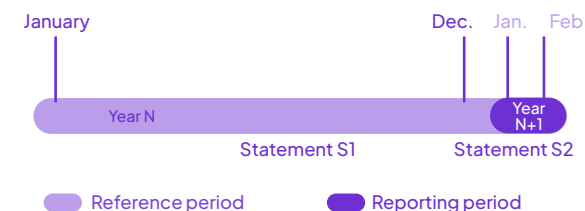

If your foreign supplier handles the declaration of the articles it supplies to you, do not include them in your own declaration

When to report?

Reporting frequencies differ depending on the quantity placed on the market that you report for the past period.

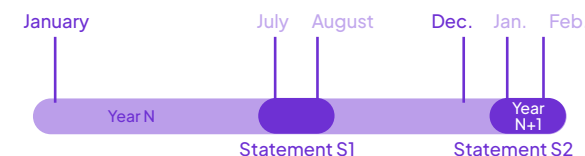

CASE 1

You place **less than 5 tonnes** on the market per year:
your **reporting** frequency is **annual**

CASE 2

You place **more than 5 tonnes** on the market per year:
your **reporting** frequency is **biannual**

HOW to report?

How to file-in the declaration?

The Producer Extranet: a dedicated tool

Ecologic provides you with a tool specifically dedicated to your declarations: the Producer Extranet.

Your personal space will let you:

- Manage your account
- Submit your declarations of products placed on the market
- View the history of your declarations and invoices
- Download your membership certificates
- Access the documentation provided: declaration help guide, eco-contribution fee list, declaration tutorial...

note

With Ecologic, you can also file your declarations for Professional EEE (Electrical and Electronic Equipment), ASL (Sports and Leisure Articles), furniture, and LMT batteries (Light Means of Transport).

The information required

The information to be provided varies depending on the eco-contribution scheme you use.

Declaration based on the standard scheme, with modulations:

- Producer status
- Fee code (to identify on EEE standard fee list)
- Quantity of products placed on the market
- Unit weight of the product

Declaration based on the simplified scheme:

- Producer status
- Fee code (to be identified on the simplified fee list)
- Quantity of products placed on the market

note

If the applicable modulation criteria cannot be justified, or in the event of doubt, the least favorable eco-contribution must be applied.

Entry methods

You have two options to file your declaration:

Manual mode : you enter your data and information manually in your personal space

File import : you can download a “Template” file from the “Declaration” section of your personal space. This entry method is recommended if you have many lines to declare.

notice

The annual minimum charge
is **200€ excluding VAT***

The amount of the eco-contribution is indicated in € per unit. It varies based on 4 adjustment criteria, which may result in an increase (penalty). If the adjustment criteria cannot be substantiated, or in case of uncertainty, the least favourable eco-contribution should be applied.

Eco-fee modulation criteria

The eco fee modulation criteria, supporting documents and control procedures are detailed in the document "**Eco-modulation Household EEE technical note**" available in the "Documents" section of your personal account on [Ecologic Producer Extranet](#).

4 criteria in the price list table:

- **Non-separable battery** (penalty)
- **Presence of HFC gases** (penalty)
- **BFR in plastic** (penalty)
- **Single use** (penalty)

* A minimum financial contribution is required to cover the administrative costs of reporting, invoicing and relations with ADEME.

notice

Other applicable criteria

The equipment concerned is the subject of a pre-declaration including equipment references. For details on how to submit your declaration, please contact Ecologic at the following address: declaration@ecologic-france.com

• Recycled Plastics Material (RPM bonus)

The criterion of incorporating Recycled Plastics Materials (RPM) applies to all Household Electrical and Electronic Equipment (EEE).

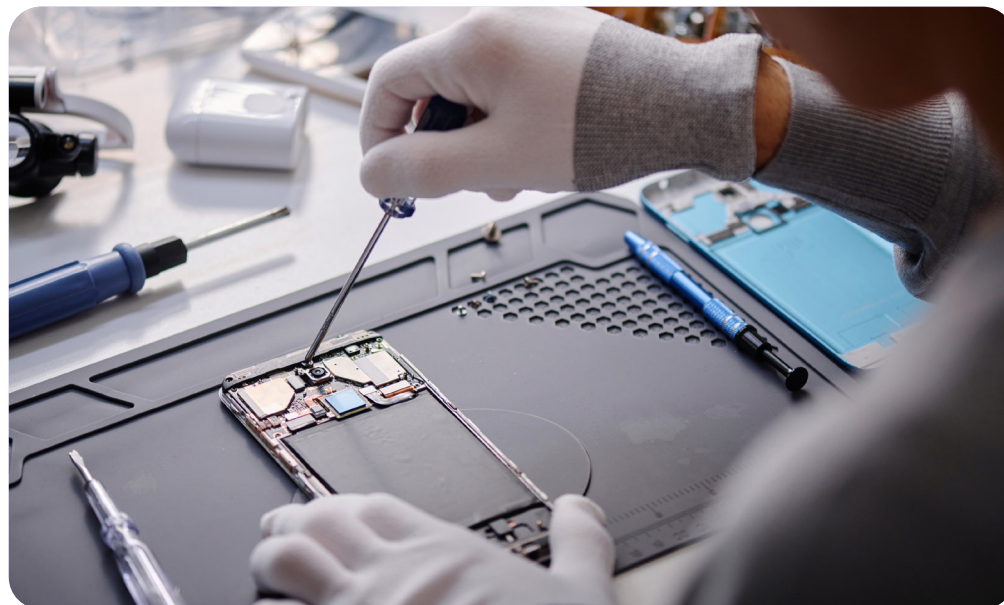

For RPM from post-consumer waste from EPR channels (open circuit), excluding food-grade resins, the calculation base is established on the basis of 450 € (excl. VAT) per ton, to be reduced to the mass of RPM in the equipment.

For RPM from post-consumer WEEE (closed circuit), the calculation base is established on the basis of 550 € (excl. VAT) per ton, to be reduced to the mass of RPM in the equipment.

• Repairability / Durability Index / [european repair score \(bonus\)](#)

The equipment concerned is indicated in the price list tables by the icon : 

If the reparability / durability index is greater than or equal to the threshold fixed, the bonus is 8.33 € excluding VAT or 16.67 € excluding VAT, depending on the equipment.

notice

Equipment set

CASE 1

Set with accessories associated with main equipment (first placing on the market)

When EEE is sold as a set including electrical or electronic accessories, the total net weight of the set (including the electrical or electronic accessories) must be taken into account. The main equipment in the set determines the applicable category.

- **Example: A smartphone sold with headphones, a charger, and a case**

In this case, the total net weight of the EEE package must be taken into account and the ecocontribution applied according to the main equipment, i.e., the smartphone, excluding the weight of the case (which is not an EEE).

CASE 2

Set with several pieces of equipment (excluding accessories) or several similar pieces of equipment

When EEE is sold as a set containing several different or similar pieces of equipment, the net weight of each piece of equipment must be taken into account individually and the eco-contribution applied to each product according to its type.

- **Example 1: Set of various EEE.**

Each EEE must be declared separately and the eco-contribution applied individually for each product according to its category.

- **Example 2: Set of identical EEE.**

A batch of 5 pregnancy tests, each pregnancy test must be declared separately and the eco-fee must be calculated based on the netweight of each pregnancy test. For "passive equipment" see page 22.

For further details, please refer to the different documents available in your personal account on [Ecologic Producer Extranet](#).
